Embedding Gallery Photos in the Main IDOC Text

1) upload you photos as attachments and save the IDOC to let them be processed.

2) Go back to your IDOC editing page (by clicking the Edit IDOC button).

3) Copy the green code of the image(s) which you want to embed, from the list of attachments.
It looks like this: **{imageID: 397}**
(Each one of your photos will have a different number.)
Then paste the code into your main text, exactly at the position where you want your photos to be placed.

4) If you need, you can use these keywords to place or / and resize your photos after the file number (imageID) and before the end bracket.

small / medium / large
left / center / right

Please note that there should be no trailing spaces, or more than one space character between the words. Also they should be typed in lowercase.

The correct combination would look like this:

{imageID: 397 large left}   ("large left" or "left large". The order is equal)

{imageID: 397 small}

{imageID: 397 center}

{imageID: 397 large}
